OmniScan for SharePoint

Scanning Context into SharePoint Content

SharePoint is a perfect tool for collecting, managing, sharing and storing information. It is however not designed to validate, control or define the information or data which flows through it. SharePoint has no mechanism to check if the information being managed is relevant or cleansed for business use.

For SharePoint to be effective and deliver maximum business benefits, the information being delivered to the application has to be precise, clean and process relevant.

The concern is how to achieve it?

Smart enterprise level scanning software such as Newgen OmniScan can help overcome this challenge. OmniScan automates and digitizes data at the point of origination or on demand before the content gets transferred into SharePoint.

OmniScan has the ability to capture paper content from multiple devices and locations and deliver it to SharePoint along with the index values.

OmniScan for SharePoint: Benefits

Out of the box SharePoint Integration: OmniScan is bundled with a SharePoint connector which means users do not need to add extra codes to integrate OmniScan with SharePoint

Perpetual License – OmniScan has a onetime perpetual license policy. Users do not need to procure fresh licenses after reaching a particular threshold of scanned documents.

Advanced Image Processing – OmniScan automatically cleans and refurbishes images captured, delivering them directly to SharePoint and enhancing SharePoint's document management, records management and workflow abilities.

Cost and Time Benefit with Bulk Scanning – OmniScan offers excellent bulk scanning and simultaneous segregating and indexing data reduces incidence of manual errors and time required to fix these errors. Hence, the data which flows through SharePoint is cleansed and of the highest quality.

Improved Controls- Managers have to struggle less to ensure healthy processes, with quality and authentic information being delivered to the right functions.

Leverage your existing investment in SharePoint - OmniScan enables enterprises to maximize their use of SharePoint by delivering document images and related business data captured from multiple locations.

System Requirements and Supported Technology

System Requirements- Same as In OS Brochure

SharePoint Versions

SharePoint 2007
SharePoint 2010

OmniScan can manage any document volume, be it ad-hoc desktop scanning to scheduled bulk scanning scenarios.
